Trading Week of
November 28th—
December 2nd
2016

Market Prowler's Tip Of The Week:

The key to success is a stop loss order. Stop losses give you two key advantages. First off, they force discipline and take human emotion out of the equation. Secondly, placing a stop loss order forces you to plan your trades ahead of time—something you should always be doing. By placing a stop loss order you're pre-defining risk as well as how much money you're willing to lose if your speculation was wrong.

At A Glance, Our Setups This Week:

SLB

UPS

DD

EOG

FLEX

The Indicators used in these charts are available for download in the indicator database on Market Prowler. We are primarily using the **Elliott Lines study** as well as the **Early Squeeze Entry** Indicator.

[Pivot Points Page 8. Monthly Stock Pick On
Members Page.](#)

SLB– A bullish squeeze fired off on the daily chart, the price action is between two major Elliott Lines, because of strong bullish momentum complimented with a squeeze it is likely price action will test the 83.18 level.

UPS - A bullish squeeze on the daily chart took us right into the 116.26 Voodoo Line, a pullback at this point would be likely, however longer term bullish momentum is probable due to the squeeze.

DD—A squeeze hasn't fired off yet, however we have strong bullish momentum as well as a purple bar (using the Early Squeeze Entry indicator), telling us that a squeeze fire-off is imminent in the future. Using Elliott Lines a good price target for this trade would be the 72.51 level.

EOG- A bullish squeeze is setting up, all momentum indicators are very strongly positive, we have purple bars on the Early Squeeze Entry indicator telling us that a squeeze will fire off in the near future. Great trade candidate for an early entry!

FLEX– Great trade opportunity to get into a squeeze early. Bullish momentum on wave and TTM_Squeeze histogram, we have a purple bar confirming that a squeeze will be firing off in the near future.

Day Trades

The Day Trading environment is a very fluid and rapidly changing one. Market Prowler focuses primarily on high probability swing trades using the squeeze method. However, for our subscribers who day trade we have provided this table of calculations where we outline weekly and monthly pivot points for commonly day-traded stocks. Use this as a quick reference guide when fading trends using the Pivot Fade method.
